Walnut	AW25	AW2	AW8	AW20
White	AWH25	AWH2	AWH8	AWH20
White Oak	AWO25	AWO2	AWO8	AWO20

**Please Follow
 These Easy Directions
 When Applying
 Timbermate Woodfiller.**

Before Proceeding Please Note:

• **Timbermate will dry lighter and return to its original color once the final finish is applied.**

• **Timbermate can be mixed with any tint or stain to achieve a custom color.**

For Spot Patching

1. APPLY: If staining, use Timbermate Natural/Tint Base. Otherwise match the color to the wood. Using a plastic or high quality stainless steel putty knife, apply Timbermate to the floor directly out of the tub prior to the last sanding. (NOTE: If filler turns black, the putty knife is not high content stainless steel; however, the black will sand off.)

2. FILL: If hole is greater than 1/4", fill by layering Timbermate in 1/4" increments.

3. DRY: Let Timbermate dry thoroughly. Use a heat gun or similar to speed drying time if desirable. (Timbermate is properly dry if it sands to the consistency of baby powder.)

4. SAND: Final sand and remove all dust and debris.

5. STAIN: Apply stain to the floor (if staining).

6. FINISH COAT: Apply any final finish coat.

For Trowel Filling

1. MIX: If staining, use Timbermate Natural/Tint Base. Otherwise match the color to the wood. Mix Timbermate in the tub with warm water (a mixer attached to a heavy duty drill is ideal). Slowly pour the water in as you mix – usually about 15% water by weight. Mix until Timbermate has the consistency of toothpaste.

2. APPLY: Apply Timbermate, just before the final sand, with a plastic trowel, or rubber float across the grain over the entire floor. Make sure the filler is forced into deep voids. Do not apply Timbermate too heavily – a small amount goes a long way. Remove all excess Timbermate. (Return excess to the Timbermate container-no waste.)

3. DRY: Let Timbermate dry thoroughly. Use a heat gun or similar to speed drying time if desirable. (Timbermate is properly dry if it sands to the consistency of baby powder.)

4. SAND: Final sand and remove all dust and debris. (If grain filling do not use a grit coarser than 120.)

5. STAIN: Apply stain to the floor (if staining).

6. FINISH COAT: Apply any final finish coat.

For Grain Filling (filled finish)

1. MIX: If staining, use Timbermate Natural/Tint Base. Otherwise match the color to the wood. Mix Timbermate in the tub with warm water (a mixer attached to a heavy duty drill is ideal). Slowly pour the water in as you mix – Timbermate should have the consistency of thick paint. Allow Timbermate mixture to dry to the consistency of toothpaste before sealing tub.

2. APPLY: Just before the final hard plate or screening, apply Timbermate by flooding the floor and squeegee it across the grain over the entire floor. Do not apply Timbermate too heavily – a small amount goes a long way. Remove all excess Timbermate (return excess to the Timbermate container-no waste).

3. DRY: Let Timbermate dry thoroughly. Use a heat gun or similar to speed drying time if desirable. (Timbermate is properly dry if it sands to the consistency of baby powder.)

4. SAND: Final hard plate or screen and remove all dust and debris. (NOTE: Do not use a grit coarser than 120.)

5. STAIN: Apply stain to the floor (if staining).

6. FINISH COAT: Apply any final finish coat.
